SEAMSIL® for cut edge corrosion

DELCOTE® for roof recoating

Specification:

Pontefract site, is latest ASDA store to get Seamsil® cut edge roofing treatment.

In 1994 ASDA had the foresight to use an innovative product called Seamsil®, to repair the roof of its Lutterworth Magna Park distribution centre. 20 years later its Pontefract store has become the 34th ASDA property to benefit from the patented silicone external repair system, for cut edge corrosion on profiled Plastisol/PVDF coated steel roof sheeting.

The problem was cut edge corrosion. It is caused by a combination of poor installation techniques and on-site cutting plus attack from acid rain and pollutants, which are then retained as moisture in critical roof overlaps and gutter overhangs. This results in corrosion of the profiled steel roof sheets. If not treated quickly and effectively, the damage can often lead to the need for partial or complete roof replacement. Seamsil® provides an ideal sustainable solution to the problems. It helps to extend the life of roofs treated and retain property value.
