SEAMSIL[®] for cut edge corrosion

DELCOTE[®] for roof recoating

Specification:

Planned refurbishment to the busy Raben Group Logistics facility at Gadki near Poznan in Poland revealed that the existing Plastisol coated steel roof sheets had reached their “re-paint decision time” and were exhibiting classic cut edge corrosion to the sheet ends together with age related delamination of the factory applied coating. The steel sheets themselves were in good condition, it was only their protective coating that needed reinstating. Since the continuous freight operation could not be disrupted, the project management team at DTZ Poland proposed recoating the roofs with Delcote[®], a silicone coating whose physical properties are proven to withstand the extremes high summer and harsh winter weather and temperature. The Delcote[®] solution was able to offer negligible site interference whilst providing complete weather protection and corrosion resistance for decades to come. Qualified applicator Kettles Ltd first treated the roof to Seamsil[®], preventing further corrosion to the critical lap joints and other areas of cut edges and fixings followed by Delcote[®] silicone coating, applied to a finish colour of Goosewing Grey.
