

PROJECT : Royal Mail, Birmingham

Client

Royal Mail

Contractor:

Mayfair Refurbishments

Materials & Inspection:

Approved Delvemade Distributor

Products Used:

SEAMSIL® for cut edge corrosion

DELCOTE® for roof recoating

Specification:

Seamsil® has been specified and used to secure the long term performance of the roof at one of Royal Mail's main UK retail outlets. The prestigious Birmingham Mail Centre takes the number of UK-wide mail facilities treated with Seamsil® to over two hundred.

The problem was cut edge corrosion. It can be caused by a combination of poor installation techniques and on-site cutting plus attack from acid rain and pollutants, which are then retained as moisture in critical roof overlaps and gutter overhangs. This results in corrosion of the profiled steel roof sheets. If not treated quickly and effectively, the damage could lead to the need for partial or complete roof replacement.
