

PROJECT : Staples, Norwich

Client

Staples

Contractor:

Elite Roofing

Materials & Inspection:

Approved Delvemade Distributor

Products Used:

SEAMSIL® for cut edge corrosion

DELCO® for roof recoating

Specification:

As part of the well known office suppliers on-going long term maintenance programme, Staples retail outlets around the UK have been having their metal roofs refurbished with Seamsil® - the UK's leading Cut Edge Corrosion treatment. With minimal disruption, Staples busy Norwich store, has become the company's seventeenth property to date, to benefit from the patented, silicone external repair treatment that is guaranteed to extend a roof's life for many years to come.

The problem was cut edge corrosion. It can be caused by a combination of poor installation techniques and on-site cutting plus attack from acid rain and pollutants, which are then retained as moisture in critical roof overlaps and gutter overhangs. This results in corrosion of the profiled steel roof sheets. If not treated quickly and effectively, the damage could

lead to the need for partial or complete roof replacement.
